

FCC whom it may concern,

I choose Sorenson Videophone.

I have two reasons:

an excellent qualified interpreters no matter what How long have I am waiting that I do not want less qualified interpreters to cause our miscommunication. I believe that They are working on to get more qualified interpreters and set up more sorenson vrs centers in the us. It is very hard to find excellent qualified interpreters because most deaf people were using their primary (first) language as American Sign Language and takes few years to become actual qualified interpreter.

Please do not want that FCC force to push Sorenson VRS to hire more less qualified interpreters that most deaf people do not want to communicate with less qualified interpreters because of more misunderstanding and miscommunication. Please give some time for Sorenson VRS to train with well-qualified interpreters. the time will come that They will have both great immediate answer and many well-qualified interpreters.

Sorenson videophone have many excellent features that most deaf people are happy to communicate with many deaf people in natural primary american sign language. I believe that Sorenson is still working to develop more technical features to improve to satisfy deaf people who are sorenson videophone user.

Please do not push Sorenson VRS with time frame. FCC should follow what deaf people wants because they are sorenson videophone user. Remember that Hearing people do not use Free Sorenson videophone.

I praise that Sorenson VRS of employees or representatives are working so hard to get more well-qualified interpreters and are setting more new centers in the us.

They serve Deaf people first that i am overly impressed.

FCCially Yours,

James Miller, Jr.
Sorenson Videophone User
